

Your Project Title Goes Here

Your Name (Your Roll)

Summary/Abstract

It gives viewers the most *important information* about your project at a glance. Think of it as a mini-version of your entire poster, highlighting the problem you addressed, what you did, and your key findings in a clear and concise way. To write it effectively, focus on briefly stating your project's purpose, your main approach, and your most significant results so someone can quickly grasp the essence of your work.

Objective/ Research Question

It clearly states what you aimed to achieve with your project or research. Think of it as the guiding star for your work: what specific goal were you trying to reach, or what key question were you trying to answer? Directly state your objective using action verbs like “*to develop*,” “*to investigate*,” or “*to compare*” or by clearly phrasing your central research question that your poster will explore.

Method/Approach

Explain how you conducted your project or research. Think of it as a simplified roadmap of your work, highlighting the key steps and techniques you used to achieve your objective or answer your research question. Write this section by focusing on the most important aspects of your process – what did you do? – and consider using visuals like flowcharts or diagrams to make your methods easy to understand at a glance. Equations can be written as follows:

$$E = m c^2.$$

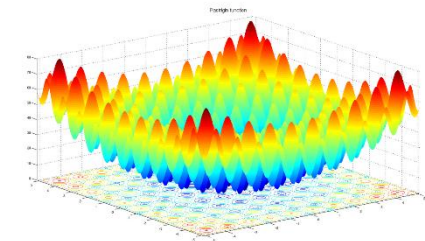

You can also use bullet points anywhere in the slide, such as:

- The font size for normal text, header, your name, and project title are 15, 15, 16, and 18, respectively. The font face is Helvetica. Title, your name, and section headings are boldfaced.
- You may change the sections; there is no fixed rule. For example, for a theoretical work, experimentation may not be required.

Results/Findings

This section showcases the outcomes of your work – what did you discover or achieve? Think of this as the core evidence supporting your project, where you present your key data and observations. Write this section by prioritizing visual elements like graphs, charts, and images to clearly display your most important results, and use concise text to highlight the meaning and significance of these findings.

Header 1	Header 2	Header 3
Font size is 12	for table	entries.
Slide	Width: 33.867	Height:19.75

Conclusion/Significance/Implications

Write the overall take away here.
